                                                      This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for

                                                                                                                                                                                                                                                                                                                        The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GKIERGYLGVGLQDLSGDLQNSYDNKEGAVVISVEKDSPAKKAGILVWDLITEVNGKKVK 240

                                                                                                                                                                                                The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogentc and induce a long-lasting immuno response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).

that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis,

                                                                                                                                                                          The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).

The present invention provides isolated polynucleotides encoding HtrA, PonA, HypC, LygS, YefW, ABC1 or Omp100 protein of Lawsonla intracellularis. The sequences can be used in vaccines for the prevention of Lawsonia intracellularis infection. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TrophoA mutagenesis was used in the mouse virulent S. typhimurium strain C5. Mutants were selected likely to harbour lesions in genes that have a signal peptide sequence, i.e. proteins likely to be targetted through a bacterial membrane. Isolation of the DNA flanking the TrophoA insertion identified the gene (htra) that has been insertionally activated. Comparison of the translated protein sequence showed that it shared 88% homology with the sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain seaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The carbon of control of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.
                                                                                                                                                                                                                                                                                               New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2.8%; Score 11; DB 22; Length 168; 100.0%; Pred. The proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (1), ABMSG044-ABM71526 and antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a biological sample. (1) is used to detecmine whether a compound binds to (1). A composition composition or disease caused by the disease caused by the composition or disease caused by the composition or disease caused by the composition or disease caused by the caused as a vaccine or disease caused by the composition or disease caused by the caused as a caused as a vaccine or disease caused by the caused as a vaccine or disease caused by the caused as a caused as a vaccine or disease caused by the caused as a vaccine or disease caused by the caused as a vaccine or disease caused by the caused as a vaccine or disease caused by the caused as a vaccine or disease caused by the caused as a cause or determine whether a composition caused as a vaccine or disease caused by the caused caused by the cause of t
                                                                                                                                                                                                                                                          New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Catalytic site; protease; HtrA; surface protease; fermented product; vaccine; dietary protein; cheese production; digestive enzyme.

The present sequence represents a HtrA surface antigen from Lactococcus lactis subsp. lactis. The specification describes a method for the production of a protein. The method comprises culturing a bacterial strain that expresses the protein and is prepared from a Gram-positive species with a genome no larger than 3.2 Mb by mutational inactivation of the HtrA surface protease, and recovering the protein exported from the cells. Inactivation of HtrA almost completely eliminates degradation of exported proteins, so increases yields of the protein and prevents contamination by proteolytic degradation products (facilitating purification at reduced cost). The bacterial strain is used for preparation of fermented products, therapeutic proteins (especially vaccines) or dietary proteins (e.g. for the production of cheeses or enzymes for facilitating digestion).
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bacteria deficient in activity of protease HtrA, useful for production of proteins, e.g. vaccinating antigens, that are exported from the cell, provide increased yield
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAA05803 to AAA05872 encode proteins, polypeptides and peptides (given in AAY91275 to AAY91343) isolated from Group B Streptococcus (GBS), also Mown as Streptococcus agalactiae. The GBS polynucleotides and polypeptides have antibacterial activity. Immunopenic compositions comprising GBS polynucleotides or polypeptides can be used as vaccines and for the treatment or prophylaxis of GBS infection. The polynucleotides and polypeptides can also be used in the detection of GBS
                                                                           The present invention is related to a Lactococcus lactis nucleotide sequence (ABA9021) and related proteins (ABB53300-ABB55621). The nucleic acid sequence; is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent wo200177334 (published 18-Ocr-2001) which is available in electronic format directly from WIPO at ftp.WiPo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New Group B Streptococcus protein, useful as vaccine, for diagnosis of Streptococcal infections and for screening of antibodies or affibodies
                                                                                                                                                                                                                                                                          Gaps
                       sequence useful in the identification or Lactococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Group B Streptococcus; Streptococcus agalactiae; protein antigen; vaccine; screening; immunogen; detection; diagnosis; infection; antibody; affibody; antibacterial.

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus sydgences (S1), given in the specification. The proteins have antibacterial and antiinflammatory cativity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and attibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a compound binds to biological sample. (I) is used to detect Streptococcus in a composition comprising (I) or a nucleic acid encoding (I), may be composition avaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therappy. Antibodies to (I) are used for affainty chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.
                                      secreted antigens in gram positive bacteria. AAA05873 to AAA05941 represent primers used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -
                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (51), given in the specification. The proteins have antibocterial and antihiflammatory activity. (1), nucleic acids encoding (1), ABMS6044-ABM71526 and antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a composition comprising (1) or a nucleic acid encoding (1); may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity chromosomy, immunoassays, and distinguishing/identifying

The complete genome sequence of Escherichia coli K-12.";

Science 277:1453-1474(1997).

C -i- FUNCTION: PROTEASE WITH A SHARED SPECIFICITY WITH DEGP/DEGP.

-i- SUBCELLULAR LOCATION: Periplasmic.

C -i- SIMILARITY: BELONGS TO PERIDASE FAMILY S2C.

C -i- SIMILARITY: CONTAINS 2 PDZ/DHR DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

-:- INDUCTION: Transcription is cssS dependent. Induced by heat shock during exponential growth and by heterologous amylases at the transition phase of the growth cycle. Negatively regulates its own expression during exponential growth and during heat shock.
-:- MISCELLANDOUS: Inactivation results in compensating overexpression of ytvA, especially during stress conditions.
-:- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S2C.
